

MARYYAM TANVEER

Associate Software Engineer | Full Stack Developer (Python, MERN, Django, REST APIs, AI/ML)

Lahore, Pakistan | +92 313 4690846 | tanvirmeryem2@gmail.com | [linkedin.com/in/maryyam-tanveer](https://www.linkedin.com/in/maryyam-tanveer) | github.com/meryem-cmd

PROFESSIONAL SUMMARY

Final-year Computer Science student (PUCIT) and Associate Software Engineer building production-grade full stack systems across Django, MERN, and REST APIs, with hands-on AI/ML integration and cloud deployment on AWS. Experienced diagnosing real infrastructure bottlenecks (caching, connection pooling, concurrency, database load) with measurable before/after results, and deploying systems independently end-to-end on AWS EC2 and S3 via GitHub Actions CI/CD.

TECHNICAL SKILLS

Languages: Python, JavaScript (ES6+), Java, C++, C, Kotlin, HTML5, CSS3

Frameworks: Django, Django REST Framework, Flask, Node.js, Express.js, Spring Boot, React, Bootstrap 5, Tailwind CSS

AI & Machine Learning: LangChain, FAISS, HuggingFace, OpenCV, Scikit-learn, NumPy, Pandas, Streamlit, MediaPipe

Databases: PostgreSQL, MongoDB, MySQL, SQLite, Redis (Lua scripting, atomic operations, connection pooling)

Cloud & DevOps: AWS EC2, AWS S3, Gunicorn, Whitenoise, Git (feature branches & PRs), GitHub Actions (CI/CD), Prometheus, Grafana, k6

Tools: VS Code, Postman, Jira, Figma, Canva

PROFESSIONAL EXPERIENCE

Full Stack Developer(Intern) — Evolvedash (*Onsite, Lahore*)

Jul 2026 – Present

- Building the React frontend for a large-scale mobile application (~100–200 screen scope), integrating with an existing Django REST backend documented via Swagger/OpenAPI; ~20 screens completed to date
- Deploy the frontend daily via GitHub Actions to AWS S3, maintaining a consistent CI/CD delivery pipeline
- Independently rebuilt a legacy WordPress blog as a custom Django + Wagtail CMS platform, merging CMS-authored and user-generated content into one unified feed
- Implemented user authentication, a social follow system, and public/followers-only visibility controls using Django ORM and DRF
- Self-deployed the platform on AWS EC2 with Gunicorn and Whitenoise; collaborated with senior engineers on feature rollouts, maintaining clean, reviewable code and meeting delivery deadlines

Full Stack Developer Intern — DevelopersHub Corporation (*Remote*)

Jul 2025 – Aug 2025

- Developed front-end and admin functionality for a live e-commerce platform using JavaScript and REST APIs
- Built product and order management flows, including Cloudinary-based image uploads and a streamlined admin workflow
- Identified and resolved layout and performance issues across mobile and tablet breakpoints

PROJECTS

Token Bucket Rate Limiter Service | Python, Django, Redis, Prometheus, Grafana, k6 | github.com/meryem-cmd/rate-limiter

- Built a production-style API rate-limiting service (token bucket and sliding window algorithms) with persistent state in Redis, surviving service restarts
- Proved a race condition under load with a naive GET/SET implementation (80 requests allowed against a 35 limit), then fixed it with an atomic Redis Lua script (33 allowed, 427 correctly denied; latency 1.07–4.47s down to 164ms)
- Diagnosed and resolved 5 distinct infrastructure bottlenecks with before/after evidence: Redis network latency (140ms → 0.4ms), WSGI connection caps, per-request DB queries (throughput 236 → 430 req/s), undersized connection pooling, and GIL-driven contention (multi-process Gunicorn, latency 320ms → 43ms)
- Built Prometheus and Grafana dashboards for live per-client allow/deny monitoring across multiple worker processes
- Load-tested with k6 and documented benchmark limitations transparently

Django Blog App | Python, Django, Wagtail CMS, Bootstrap 5, SQLite | github.com/meryem-cmd/django-blog-app

- Built a dual-content blogging platform unifying Wagtail-authored pages and user-generated posts into a single feed, with a social follow system and visibility gating via Django ORM/DRF; deployed on AWS EC2 with Gunicorn and Whitenoise

AI FitStyler — Fashion Recommendation System | Python, Scikit-learn, FAISS, MediaPipe, OpenCV | github.com/meryem-cmd/fitstyler

- Built a multi-agent AI/ML system for personalized outfit recommendations using body-shape and skin-tone detection (MediaPipe) and a RAG pipeline (FAISS + HuggingFace embeddings) with a Streamlit UI

Enchanted Trinkets — Full Stack E-Commerce Platform | Node.js, Express.js, MongoDB, JavaScript | github.com/meryem-cmd/enchanted-trinkets

- Designed role-based dashboards (Manager, Employee, Customer) with tailored access controls and REST APIs; integrated Cloudinary image hosting and a batch-upload workflow

EDUCATION

B.Sc. Computer Science — Punjab University College of Information Technology (PUCIT)

Sep 2023 – Jun 2027

Lahore, Pakistan | GPA: 3.44 / 4.0 | Merit Scholarship Recipient (PEF, 2023–Present)

ACTIVITIES & LEADERSHIP

Media Team Member — EMS Society, PUCIT

2023 – Present

Designed promotional content for university events and managed social media outreach channels.
